Press Release 21 – 2007

**Nayarit Gold encounters additional high grade gold and silver
at Orion District**

**3.03 g/t gold and 350.16 g/t silver, or 10.03 g/t gold equivalent
over true width of 6.32m,**

Includes 11.35 g/t gold and 955 g/t silver over 0.60m true width

Nayarit Gold Inc. (TSXV: NYG) is pleased to announce additional high grade gold and silver assay results, obtained in the second hole in its Phase One - 7,000 metre diamond drilling program in the Orion District in Nayarit State, Mexico. Hole OR-07-31 was the second of seven holes to be drilled to test the “Minas de Animas” structure. Six of these holes have been completed, with assays from four holes still pending from ALS Chemex. The seventh hole is nearing the expected vein intercept. A second drill rig has begun testing the vein system on the Lazaro Cardenas structure, located 25km southwest of the Animas project.

The following table summarizes assay data received from drill hole OR-07-31, it should be noted that sample 725276 is a duplicate of 725275 and the values for the two samples have been averaged to arrive at a composite number:

Sample Number	From (metres)	To (metres)	Width (m)	Gold (g/t)	Silver (g/t)
725271	122.0	123.0	1.00	1.76	131
725272	123.0	124.0	1.00	8.02	955
725273	124.0	125.0	1.00	11.35	924
725274	125.0	126.5	1.50	1.26	212
725275	126.5	128.0	1.50	7.77	475
725276	126.5	128.0	1.50	2.16	215
725277	128.0	129.5	1.50	0.27	65
725278	129.5	131.0	1.50	0.44	295
725279	131.0	132.5	1.50	0.19	194

“We are very pleased with the initial results from the area, and the first two holes have demonstrated positive and consistent grades and widths.” stated Colin Sutherland, President & CEO. “The results are extremely encouraging, and we are expecting more data in the coming weeks from Animas. We continue to move forward with our program, and are expecting very good results from Lazaro Cardenas.”

The Company has begun drilling with a second drill rig as part of its Phase One program, and will test the “Lazaro Cardenas” area. The main Lazaro Cardenas system has been traced on surface for more than 8 kilometres, with widths in excess of 10m. The mineralized system containing silver-rich veins in a large structural zone has returned initial sampling results from surface chip channel sampling of up to 18.65 g/t gold over 2.0m and 1,620 g/t silver over 0.80 metres. Historic pits and trenches, as well as adits and shafts have been identified intermittently along the structure. The system crosses the Pan American Highway, Mexico 15, as well as the Mexican National Rail Road, resulting in excellent infrastructure in the area.

William J. Warren Jr., M.Sc., P.Geo is a Qualified Person as defined in NI 43-101 and has reviewed this release.

QA/QC Procedures: The Company has implemented a quality control program to ensure best practices in sampling and analysis of the core samples. The core is first logged then split in half during the sampling process with the remaining half being retained for verification and reference purposes. Duplicates, standards and blanks are inserted randomly into the sample stream. The samples are delivered directly in security sealed bags to ALS-Chemex Laboratories preparation facility in Guadalajara, Jalisco (Certification ISO 9001). Sample pulps are shipped from there to ALS-Chemex Laboratories in North Vancouver, Canada for analysis by ICP techniques. Metallic screen fire analyses for silver are also regularly run as an additional QA/QC check. Gold equivalent values are calculated using a 50:1 ratio.

Nayarit Gold Inc. is a Toronto based junior resource company dedicated to gold exploration in the proven precious metal districts of Mexico. Management’s goal is to build a profitable resource company and maximize shareholder value through successful exploration programs and continued development.
